- Manage temporary and seasonal employees to complete plot maintenance and data collection according to protocols.
- Able and willing to learn new skills
- Familiarity with field trial design and layout of trials in the field
- Ability to set up, calibrate and operate field research equipment
- Ability to interact and collaborate with co-workers and clients in a professional manner
- Contribute to maintaining a safe and respectful work environment

Field Principal Investigator/Research Associate Job Description:

As a Researcher, you will be responsible for conducting the field phase of Good Laboratory Practice (GLP)-compliant research trials. You will also be assigned efficacy and/or variety trials to conduct when there are not sufficient GLP trials to complete your workload. You will be responsible for all aspects of conducting these agricultural field trials as per GLP, protocol and Standard Operating Procedure (SOP) requirements. This includes, but is not limited to, locating suitable trial sites, operating plot equipment, planting and maintaining trials, test item and maintenance pesticide applications, assessments, and collecting samples and/or harvesting trials. The field season involves critical times for the success of the research program, so extended work hours may be required at these times. Other duties include maintaining records as per protocol and SOP requirements and submitting trial reports to clients.

You will be required to work outdoors, operate small plot equipment, and drive trucks and trailers. Participation in annual SOP review and ongoing training will also be required.

You will be expected to work independently and as a member of the Saskatoon team, cooperating with other research personnel to ensure all phases of the work at the station are completed successfully. You will also be responsible for supervising and organizing tasks for Summer Research Technicians during the summer months. The Ag-Quest team, consisting of Project Coordinator/Test Site Management, Station Manager, and Senior PIs in the group are available for mentoring and guidance as you learn this new role. Some travel may be required to trial sites and to other Ag-Quest Stations as needed. Occasional travel to client or industry meetings or training courses, largely during the winter, may be required.

As an Ag-Quest Researcher you will be primarily responsible for conducting Environmental Fate GLP-compliant trials, other trials as assigned, and other duties as assigned. Attention to detail, organization and patience are critical attributes for this position.

Opportunities at Ag-Quest:

- Networking and conducting trials for diverse clients and international agriculture companies
- Working at a Canadian-owned and family-owned company
- Being a part of a small, dedicated team
- Developing diverse skills with multiple crops/equipment/pests/products
- Working with co-workers across the prairie provinces
- Opportunities for advancement and provincial movement across site locations
- Education and training opportunities both internally and externally
- Fast paced, changing, and challenging work
- Flexible winter workloads and vacation

Start date: January 1, 2026

Salary: Dependent on relevant experience and education. Equitable Life health benefits program and matching RRSP available.

Please outline your work experience, research qualifications and practical skills in the resume or cover letter and be prepared to provide references. Only those under consideration will be contacted. This position will remain open until it is filled.

Please apply to Ag-Quest by emailing careers@agquest.com.
